Spot Vision Screener helps enable the quick detection of common vision issues on patients from 6 months of age through adult.

It allows for the screening of all patients regardless of age, eye color, or other potentially limiting factors.

WelchAllyn®

Revolutionizing vision screening in children

Just a few seconds can help positively impact a child's future

TODAY

FUTURE

Detects 6 amblyopic risk factors

Myopia

Near-sightedness

Hyperopia

Far-sightedness

Anisometropia

Unequal refractive power

Astigmatism

Blurred vision, eye structure problem

Strabismus

Eye misalignment

Anisocoria

Unequal pupil size

Astigmatism

- Spot Vision Screener's criteria is age specific to assist with early detection of amblyopic risk factors in children
- Allows customization of age-specific criteria to meet local guidelines

Screens individuals from 6 months of age in seconds

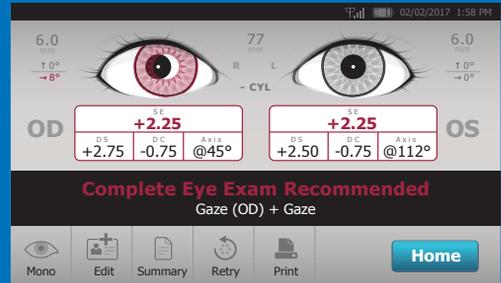

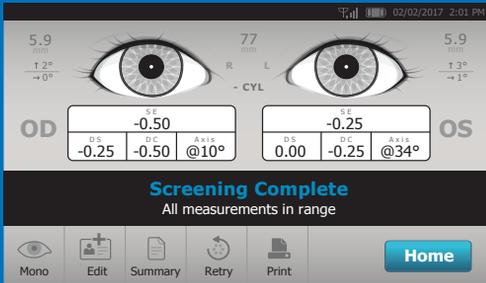

- Screens patients of all ages (6 months to seniors) in just seconds
- Screens both eyes at once from a nonthreatening 1-meter distance
- Uses lights and sounds to help engage children
- Ideal for non-verbal patients, children and patients with disabilities

Hassle free and easy to use!

- Easy to use and easy to implement
- Minimal training is required
- Doesn't require eye dilation
- Intuitive, on-screen instruction guides user through the screening
- Provides clear instructions and easy-to-understand results

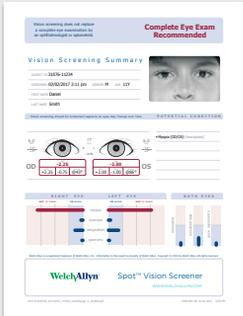

Provides instant results

- On-screen results of both eyes displayed in seconds
- Easy-to-understand (pass/refer) results are immediately available
- Auto capture technology—automatically captures 24 images in 1.2 seconds for instant results
- On-screen results can be customized

Print and save results immediately

Customized patient report

Printed label report

Results can be sent directly to EMR

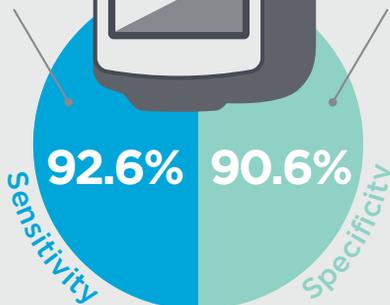

- Wireless printing and WiFi-enabled for easy export of data
- Import and export of data and settings via USB port
- Printed report can be customized with institution's banner

Clinically proven to have high accuracy

Percentage of patients correctly identified as having a vision condition

Percentage of patients correctly identified as not having a vision condition

A clinical study has shown Spot Vision Screener to have 92.6% sensitivity and 90.6% specificity.⁵

6. Accuracy of the Spot and Plusoptix photoscreeners for detection of astigmatism; 2015, Mabel Crescioni, JD, DrPH, Joseph M. Miller, MD, MPH, and Erin M. Harvey, PhD.

Adapts to any workflow and is powered for mass screening events

In one study, Spot Vision Screener was used to test the vision of

537 ELEMENTARY STUDENTS

With Spot, the entire
population was screened in
LESS THAN

5 HOURS⁷

The Spot Vision Screener is intended to produce optical images that can help identify refractive errors and ocular misalignments by detecting special light reflexes from each eye during screening. The Spot Vision Screener evaluates these light reflexes from the retina to estimate refractive error. It also estimates pupil size, pupil distance and eye gaze deviation. It is intended for use on subjects six months of age through adults. Medical device (93/42/EEC); Class I(m). Manufacturer: Welch Allyn, Inc., 4341 State Street Road, Skaneateles Falls, NY 13153 USA. EC Rep.: Welch Allyn Limited, Navan Business Park, Dublin Road, Navan, County Meath, Republic of Ireland. This medical device is a regulated health product which, pursuant to such regulation bears a CE mark. Welch Allyn recommends that you carefully read the detailed instructions for safe and proper use included in the documents accompanying the medical device. The personnel of healthcare establishments are responsible for the proper use and maintenance of these medical devices. Welch Allyn reserves the right to make changes without notice in design, specifications and models. The only warranty Welch Allyn makes is the express written warranty extended on the sale of its products.
